EVENT REPORT

DEPARTMENT OF COMPUTER SCIENCE

Name of the Event: Seminar on Data Analytics

Date: 23-09-21

Time: 1:30 pm to 2:30 pm

No. of Students Participated: 50

About the Event:

Key Points Covered:

1. Definition and Importance of Data Analytics:

- Data analytics involves the process of examining raw data to uncover patterns, trends, and insights that can be used to make informed decisions.
- Importance of data analytics across industries: Data-driven decision-making can lead to improved efficiency, innovation, and competitive advantage.

2. Types of Data Analytics:

- Descriptive Analytics: Examining historical data to understand past performance and trends.
- Predictive Analytics: Using statistical algorithms and machine learning techniques to forecast future outcomes.

3. Data Analytics Process:

- Data Collection: Gathering relevant data from various sources, including databases, sensors, and digital platforms.

- Data Pre-processing: Cleaning, transforming, and formatting raw data to prepare it for analysis.

4. Applications of Data Analytics:

- Business Intelligence: Analysing sales data, customer behaviour, and market trends to optimize marketing strategies and improve operational efficiency.
- Healthcare Analytics: Utilizing patient data to improve diagnosis, treatment, and healthcare delivery.
