Report for Seed Distribution

World Environment Day is celebrated globally on June 5th each year to raise awareness and encourage action for the protection of our environment. In 2023, as part of the celebrations, seed distribution events were organized on college campuses to promote environmental conservation and sustainable practices among students. Ankur green Club was established in college and 250 seed packets were distributed to students and the college staff.

The primary objective of the seed distribution initiative was to encourage students to actively participate in environmental conservation efforts by planting native tree species and promoting biodiversity on their campuses.

Native tree species' seeds were selected based on their suitability to the local climate and ecosystem. Emphasis was placed on selecting seeds of trees that promote biodiversity, provide ecosystem services, and support local wildlife.

Each college campus designated a central location for the seed distribution event. Promotion and awareness campaigns were conducted in advance to encourage student participation. Informational materials highlighting the importance of tree planting and environmental conservation were disseminated.

On the day of the event, students were invited to collect packets of seeds from designated distribution points on campus. Volunteers were present to provide guidance on seed planting techniques, suitable planting locations, and environmental stewardship practices. The seed distribution initiative received enthusiastic participation from college students, faculty, and staff.

Key outcomes of the campaign include:

The initiative raised awareness among students about the importance of environmental conservation and the role of tree planting in mitigating climate change and preserving biodiversity.

The events fostered a sense of community among students, encouraging collaboration and collective action towards a common environmental goal.

Thousands of native tree seeds were distributed and planted across college campuses, contributing to the greening of urban areas, improving air quality, and enhancing campus aesthetics.

By nurturing the planted trees and monitoring their growth, the initiative is expected to have a lasting impact on campus ecosystems, providing habitat for wildlife, reducing carbon emissions, and promoting sustainable living practices.

The seed distribution initiative on college campuses for World Environment Day 2023 served as a catalyst for fostering environmental consciousness and sustainable behavior among students.

Ankur Green Club

Orientation Program for student

Orientation program for a Ankur green club student at a college organized on 14/09/2023 at B.M.S Seminar Hall with 106 students and 3 program officers. Initiative to introduce students to environmental awareness and sustainable practices, Here's a structured plan for the orientation program:

Goal: To introduce incoming students to the mission, activities, and benefits of the Ankur Green Club, fostering a sense of environmental responsibility and community engagement.

Brief overview of the Ankur Green Club's mission and objectives

Introduction of club advisors and key members.

Highlight the importance of environmental conservation and sustainable living.

Showcase statistics and examples of environmental issues and their impact on local and global communities.

Encourage students to join the Green Club and get involved in upcoming activities.
